But I would say that a large number of veterans have been seriously affected by their experiences. The reinforcement of these positions in a medical setting serves only to further discourage men from seeking help. This paper examines the effects of humour studied within one organization where physical, misogynistic and homophobic humour is highly emphasized and encouraged.

Although their humour may be perverse, its unconstrained nature successful. In this respect, our positions as gendered participants in current debates about masculinity are significant. A subject position provided by the biomedical discourse, the lay expert possesses knowledge of medicine and medical issues related to their own health status and health in general. Another prominent discourse articulated by many writers on the subject is psychologically based, stressing that clients are very definitely not ordinary men.

In order to carry this off, a household must be set up and maintained. This

effect was inverted, however, in women whose finger length ratios were consistent with high prenatal testosterone exposure. Yet very large numbers of men are complicit in sustaining the hegemonic model.
